***Allowable Subject Matter***

1. Claims 1-5 are allowed.

The following is an examiner's statement of reasons for allowance:

2. Claims 1-5 are allowable over the prior art of record since the cited references taken individually or in combination fails to particularly disclose a method of allocating corresponding identity to each of a plurality of BSCs and BTSs in an IMT-2000 system by transmitting BSC ID allocation data to all the BSCs coupled to the OMC and allocating corresponding specific BSC IDs and corresponding group IDs to all BSCs and by transmitting BTS ID allocation data to all the BTSs coupled to each BSC and allocating corresponding specific BTS IDs to all BTSs, as specified in an independent claim 1. It is noted that the closest prior art of record, Lim (US Patent 6766168) shows a method of operating a packet data service using the packet data service network where the packet zone identifier table shows BSC IDs and BTS IDs. However, Lim fails to suggest allocating corresponding identity to each of a plurality of BSCs from the OMC and BTSs from the BSC by exchanging allocation data as required by the claimed invention.

***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
  - US Patent (6389282) to Hirsch discloses operation and maintenance system for a mobile communications network
  - US Patent (6351647) to Gustafsson discloses location-dependent services in a mobile communication system
